63,882,354	$1.86	4,467.37	$26,568.99

The Census for Manitoba for 1916 gives values as follows:- Wheat 90.4 cents, Oats 35.3 cents, Barley 50.6 cents, Flax 160 8 cents, Other Grains 96.3 cents.

Freight from Manitoba points, Ft.William will average 15 cents per hundred less than from Alberta. Applying that, makes in Alberta: Wheat 81.4 cents, Oats 30.3 cents, Barley 43 cents, Flax 152 cents, Other Grains averaging them at 50 lbs. per bushel makes 88 8, say 88 cents per bushel

The said census places Horses at $155. Cattle $42. Sheep $8.46, Hogs $10.92. I think the value placed on horses is very much too high for Alberta, considering the number of Indian ponies and small horses, consequently have placed $100.00 on each.

Mules Only 4971 in all, of which 85% are old working animals, so have not included them. This is not a mule breeding country

Have estimated that 25% of horses and cattle, 50% of sheep, and 80% of pigs could be sold each year and not deplete the herd. I have therefore added the value of the different kinds of grain, and those percentages of the animals together, and put the result under the column "Annual Output

This leaves, of course, a good many things in the way of farm output which are not accounted for, as dairy produce, poultry, eggs, etc

It also leaves out the hay crop, very great in value but as the greater part of that is consumed on the farm, only a very small percentage should be considered as annual output. The exportation of hay from this province has not averaged very high for some years past,- probably sufficiently high to warrant being considered but probably not high enough to add very appreciably to the annual output column

Calgary 13th June 1917

W. Peace

or Manitoba for 1916 gives values as follows:- Wheat 90.4 cents, Oats 35.3 cents, Barley 50.6 cents, Flax 160 8 cents, Other

Manitoba points, Ft.William will average 15 cents per hundred less than from Alberta. Applying that, makes in Alberta:
cents, Barley 43 cents, Flax 152 cents, Other Grains averaging them at 50 lbs. per bushel makes 88 8, say 88 cents per bushel
sus places Horses at $155. Cattle $42. Sheep $8.46, Hogs $10.92. I think the value placed on horses is very much too high
e number of Indian ponies and small horses, consequently have placed $100.00 on each
1971 in all, of which 85% are old working animals, so have not included them. This is not a mule breeding country
ed that 25% of horses and cattle, 50% of sheep, and 80% of pigs could be sold each year and not deplete the herd. I have
the different kinds of grain, and those percentages of the animals together, and put the result under the column "Annual Output
of course, a good many things in the way of farm output which are not accounted for, as dairy produce, poultry, eggs, etc
s out the hay crop, very great in value but as the greater part of that is consumed on the farm, only a very small percentage
al output. The exportation of hay from this province has not averaged very high for some years past,- probably sufficiently
ered but probably not high enough to add very appreciably to the annual output column

The Census for Manitoba for 1916 gives values as follows:- Wheat 90.4 cents, Oats 35.3 cents, Barley 50.6 cents, Flax Grains 96.3 cents.

Freight from Manitoba points, Ft.William will average 15 cents per hundred less than from Alberta. Applying that, make Wheat 81.4 cents, Oats 30.3 cents, Barley 43 cents, Flax 152 cents, Other Grains averaging them at 50 lbs. per bushel makes 88 8, say 8

The said census places Horses at $155. Cattle $42. Sheep $8.46, Hogs $10.92. I think the value placed on horses is for Alberta, considering the number of Indian ponies and small horses, consequently have placed $100.00 on each

Mules Only 4971 in all, of which 85% are old working animals, so have not included them. This is not a mule breeding

Have estimated that 25% of horses and cattle, 50% of sheep, and 80% of pigs could be sold each year and not deplete the therefore added the value of the different kinds of grain, and those percentages of the animals together, and put the result under the

This leaves, of course, a good many things in the way of farm output which are not accounted for, as dairy produce, pou

It also leaves out the hay crop, very great in value but as the greater part of that is consumed on the farm, only a ve should be considered as annual output. The exportation of hay from this province has not averaged very high for some years past,- high to warrant being considered but probably not high enough to add very appreciably to the annual output column
